

- and a headland area, which is formed between the work area and a farm field peripheral edge;
- an auxiliary line creation unit that creates an auxiliary line for causing the work vehicle to autonomously travel in the headland area;
- a selection processing unit that performs a process of allowing a user to select in which of the work area and the headland area the work is to be performed and a process of allowing the user to select whether the work in the headland area is to be performed or the work is to be ended; and
- a travel control unit that causes the work vehicle to autonomously travel along at least a part of the auxiliary line created by the auxiliary line creation unit in a case where it is determined that the user has selected the work in the headland area.
